- Higher ranking then competitors,
- Reducing waste and consumption of resources,
- Elimination of pollution and contamination,
- Elimination of all-preventable accidents and incidents,
- Determination of safety regulations for each work task.

Quality, environmental protection, occupational health and safety cannot be sacrificed for production. Environmental protection, occupational health and safety are integral parts of quality.

Each individual person has his/her personal responsibility to prevent accidents and incidents. As safety primarily depends on the human factor, the individual is ultimately responsible for his/her own safety and the safety of those around her. Proper training of personnel and adequate precautionary measures will be provided to avoid accidents by an effective management and cooperation with the individual.

BİRİKİM aims to implement and develop a proactive energy management system based on sustainable development in all its activities. In this direction;

- Monitors the publications dealing with the environment and complies with the applicable laws and regulations
- Minimizes and keeps the environmental pollution under control through the Environmental Management System
- Supports all employees and subsidiary industries in their efforts to be sensitive toward the environment
- Communicates its environmental objectives and targets to the public, the subsidiary industries and the concerned organizations
- Directs its environmental activities in a manner to support the other constituents of the policy
- Commits to improve the environmental performance continuously
